#### 4. Working Group Procedural Rules

##### 4.1 Rules of the Chair

- Interim Voting (Motions – Substantive Changes) shall be by Consensus (75% [rounded up] of quorum in session);
- The Chairman rules that no Motions will be accepted when not in session;
- Administrative issues by simple majority (quorum in session);
- The Chair shall be informed of absences;
- The absent member is encouraged to send a proxy;
- A Proxy shall have voting privileges (Rule changed at this meeting {6.4}, notification e-mailed to absent members);
- Members shall attend the full length of the meeting;
- Word 7.0 shall be the document format;
- The Host shall collect and send all handout material for absent members without proxy;
- Robert's Rules of Order shall be used as a general guide;
- Guest Individual Contributors may receive working copy of the draft standard based on need;
- Chair approval shall be required for distribution of working copies of the draft standard;
- Members shall not Vote against their own non-amended Motion;
- The WG will through the course of normal business, generate confidential documentation applicable to the WG charter. As a result of this business, documentation could be released to the public through approved minutes posted on the ANS 3.5 WEB site. Other information may be released to the public as deemed appropriate by the WG Chair or Vice-Chair. In addition, information may be supplied to non-working group members on a need-to-know basis for the purpose of review and comment.

##### 4.2 Rules Enacted by the Working Group

Missing two consecutive meetings in a row without representation could result in loss of membership on the committee.  
DG-1248 comments pass by simple majority

2010 July 27-29

5.10 Bigelow Clarification

Commentary

An important theme in the ANS-3.5-2009 Standard is the avoidance of negative training in the operator training environment. It is essential that the student view the same data regardless of the means by which the data is accessed. For instance, historical data could be obtained from a process computer, trend graphs, trend charts, or history on a digital recorder. To the extent possible, the student should find the same data value at the same previous time step. This leads naturally to the requirements of section 3.3.3 and to stimulated components in particular. In general, the first paragraph of section 3.3.3 states the entire simulator must participate in simulator unique functions. Recognizing the older hardware generation of certain stimulated devices, this requirement is relaxed to some degree for the unique category of stimulated components. If stimulated devices can comply with Section 3.3.3, then the requirements are obviously satisfied. If not, then the standard requires a Training Needs Assessment be performed to identify any potential impact to the student of viewing different data values at the same previous time step via different means.

Requirement

The definition of Stimulated Components is: Hardware/software components that are integrated with the simulator process via simulator inputs/outputs that perform their functions parallel to, and either independently of or synchronized with, the simulation process.

It is the intent of Section 3.3.3, third paragraph, to be applicable to Stimulated Components that store historical data if the device is integrated with the simulator process via simulator inputs/outputs and performs its function parallel to, and either independently of or synchronized with, the simulation process. If the Stimulated Component meets this applicability, then it is required to participate in the simulator unique functions as specified in Section 3.3.3.

If a device is considered to be a Stimulated Component per Section 3.3.3, then consideration of Section 4.3.3 also applies; "For a stimulated component it shall be documented that noticeable differences have been defined and that a training needs assessment has been performed in accordance with Sec. 4.2.1.4". Section 4.3.3 shall be utilized to justify why a stimulated component does not have to meet the requirements for freeze, run, initial condition reset, snapshot, and backtrack.

Discussion

Bigelow asked for an Interpretation regarding Stimulated Components rather than a Clarification.

Should is improperly used in the Clarification.

To the extent possible, the student **should** find

AI 183 – Dennis – Forward Bigelow Clarification to ANS

5.11 Matsumoto Clarification

<p>Regarding 3.4.3.3 Simulator reactor core performance testing:</p> <p>1. <i>What do you specify as appropriate reactor core performance testing?</i></p> <p>Section 4.4.3.3, Simulator Reactor Core Performance Testing, notes that “Simulator reactor core performance testing shall be conducted each reference unit fuel cycle. Testing shall be performed in accordance with the reference unit procedures and shall be compared and demonstrated to replicate the response of the reference unit. It shall be demonstrated that the simulator response during conduct of simulator reactor core performance testing meets the reference unit procedures’ acceptance criteria.”</p> <p>The ANSI/ANS-3.5-2009 Standard, by design, does not prescribe core performance testing methodology. Currently, each simulation facility is responsible for creating a method to demonstrate adequate simulator core performance.</p> <p>2. <i>Why did you include reactor core performance testing as a requirement; was it because of a NRC requirement and/or an industry issue?</i></p> <p>It was anticipated that the industry would take advantage of a regulatory option to utilize the simulator for reactivity manipulation experience credit.</p> <p>Ref: (1) Code of Federal Regulations, Simulation Facilities, 10CFR55.46(c)(2)(i) (2) Code of Federal Regulation, Operator’s License Applications, 10CFR55.31 (a)(5)</p> <p>On November 16, 2001, the NRC amended its rules (66 FR 52667, Oct. 17, 2001) as described in 10 CFR 55.46 (c) so that facility licensees could utilize their nuclear power plant-referenced simulator instead of the actual nuclear plant for performing control manipulations that affect reactivity to establish eligibility for an operator’s license as described in 10 CFR 55.31(a)(5). The ANS-3.5 Working Group recognized and supported the need for having a requirement for simulator core performance testing since there is a direct benefit for using the simulator rather than the actual plant to meet the regulatory requirement.</p>
---

ANS 3.5 Working Group Meeting Minutes  
Oconee Nuclear Station – Seneca, SC  
2010 July 27-29

Commentary

It is important to distinguish between update and upgrade to facilitate the following discussion.

Update means incorporating new data into the simulator design database.

Upgrade means changing the simulator to match the reference unit.

Regarding Section 5.1.2.1 Initial update:

1. *Why do you specify the initial update within 18 months?*

This section applies to the first update of the simulator design database following the reference unit's commercial operation date or the simulator's operational date, whichever is later. Eighteen months provides ample time after the reference unit's commercial operation date or the simulator's operational date to review and determine the need for a simulator modification. Eighteen months was assumed to be a reasonable amount of time to update the simulator design database following new reference unit commissioning; this period of time anticipates that more effort is required to review and determine the need for a simulator modification after unit startup and commissioning tests are completed.

Regarding Section 5.1.2.2 Subsequent update:

1. *Why do you specify the subsequent update within 12 months?*

This section applies to each new design database update following the initial update. Twelve months provides ample time to review and determine the need for a simulator modification after the initial design database update.

Regarding Section 5.3.1.1 Initial upgrade:

1. *Why do you specify the initial upgrade within 30 months?*

This section applies to plant modifications that impact the simulator following its initial construction. Thirty months provides ample time after the reference unit's commercial operation date or the simulator's operational date to implement plant modifications received during simulator construction. The complexity of the plant modification can require a long period of time to implement. Thirty months is based on the total allowable time period associated with the simulator's design database update (eighteen months for the initial update and twelve months for the subsequent upgrade). Thirty months to implement reference unit modifications allows for the review and applicability determination of new data over both time periods. By the end of thirty months, new data reviewed during the initial and subsequent design database updates shall be implemented to the simulator via an initial upgrade.

Regarding Section 5.3.1.2 Subsequent upgrade:

ANS 3.5 Working Group Meeting Minutes  
 Oconee Nuclear Station – Seneca, SC  
 2010 July 27-29

1. *Why do you specify the subsequent upgrade within 24 months?*

This section applies to plant modifications that may have some impact to the simulator following the initial upgrade. Twenty-four months provides ample time after the reference unit modification is determined to be operational (or in-service) to implement the plant's modification to the simulator (twelve months to identify the reference unit modification and twelve months to implement the reference unit modification). Twenty-four months provides ample time to implement the plant modification based on the needs of the operator training program.

ANS 3.5 Working Group Meeting Minutes  
 Oconee Nuclear Station – Seneca, SC  
 2010 July 27-29

6.3 DG-1248 Comment

<p>Motion (Carried):          Section B Discussion, Role of Nuclear Power Plant Simulation Facilities in Operator Licensing, third paragraph states “This guide also applies to the use of new full-scope nuclear power plant simulation facilities...”. The ANS 3.5 Standard, section 5.1 defines possible sources of Simulator Design Baseline design data. No source exists for the category of no design data available particularly in the case of Distributed Control Systems yet the draft regulatory guide states the standard applies to new build plants. If a simulator must be delivered to support initial licensed operator training prior to detail design data becoming available, please explain the staff’s rationale for concluding that the current edition of the standard can be applied to simulators for new build plants.</p>	<p>Role of Nuclear Power Plant Simulation Facilities in Operator Licensing</p>	<p>Felker - Last paragraph 2<sup>nd</sup> sentence – The first sentence states “with the advent of new nuclear power plants”. The second sentence states “This guide also applies to the use of new full-scope nuclear power plant simulation facilities.”</p>
<p>Motion (Carried)          In 10 CFR 55.46(3)(d)(1) does the requirement for record retention of four years after the completion of each performance test or until superseded by updated test results mean whichever is longer (i.e. - if test results are not superseded within four years, can the performance test record be discarded after four years)? NEI-09-09 malfunction record retention (life of the simulator) appears to be more restrictive than 10 CFR 55.46(3)(d)(1) (four years or until superseded by updated test results). Please clarify malfunction tests record retention.</p>	<p>Regulatory Position          b.          Malfunctions</p>	<p>Welchel - How does retaining documentation for a test that is required to be conducted only once in the life of the simulator ensure continued assurance</p>

ANS 3.5 Working Group Meeting Minutes  
 Oconee Nuclear Station – Seneca, SC  
 2010 July 27-29

<p>Motion (Carried):          Provide the following comment to the NRC:          Delete DG-1248 section C.2.e.          Reason: Section C.2.e in DG-1248 (In regard to Section 4.4.3.1, “Simulator Operability testing,” Footnote 6, as referenced to Appendix A, “Guideline for Documentation of Simulator Design and Test Performance,” simulation facility licensees should note that Appendix A provides examples that are applicable to Section 4.4.3.1) is already contained within ANSI/ANS-3.5–2009 Section 4.4.3.1 Note 6 (Appendix A) provides examples of acceptable simulator performance test documentation. This is stating a fact which is already confirmed in the Standard.</p>	<p>Regulatory Position          e.          4.4.3.1 Operability testing</p>	<p>Colby - Clarification of the word “applicable”</p>
<p>No action</p>	<p>Regulatory Position          g.          4.4.3.3 Reactor Core Performance Testing</p>	<p>McCullough – The last sentence does not pertain to Core Performance Testing and should be removed.</p>

ANS 3.5 Working Group Meeting Minutes  
 Oconee Nuclear Station – Seneca, SC  
 2010 July 27-29

<p>Motion (Carried):          Provide the following comment to the NRC:          Suggest items (1), (2) and (4) in C.2.h address unplanned events only.          Reason: Paragraph C.2.h of Draft Guide 1248 appears to be too broad.</p> <p>Motion (Carried):          Provide the following comment to the NRC:          Request the phrase “within 60 calendar days following the event” in DG-1248 paragraph C.2.h be removed.          ANSI/ANS-3.5-2009 Section 4.4.3.4 provides adequate guidance.</p>	<p>Regulatory Position          h.          4.4.3.4 Post Event testing</p>	<p>Hendricsen – During a normal shutdown that includes a Manual reactor Trip, is PEST required?          Welchel - Recommendation to adopt without exception or do not comment at all.          Tarselli – Add unplanned to items two and four.          Tarselli – What does 60 days mean.</p>
<p>Motion (Carried):          Provide the following comment to the NRC:          Delete DG-1248 Section C.3 the last part of the second sentence (and ANSI/ANS-3.5-1998, which NEI-09-09, Revision 0, supported).          Reason: Under this section (NRC Acceptance and Endorsement of NEI-09-09, revision 1) we should only be dealing with items, issues which deal with ANS-3.5-2009 Standard.</p>	<p>NRC Acceptance and Endorsement of NEI-09-09, Revision 1</p>	<p>Colby – Delete all references to ANS-3.5-1998 and NEI-09-09 Rev0.          Colby – Delete last sentence.          Florence – Perception that NEI-09-09 does not ensure expected plant response.</p>
<p>Motion (Carried):          Please reconsider the use of Reference-Unit in lieu of Reference Plant for consistency with regards to the ANSI/ANS-3.5 Standard.</p>	<p>Glossary</p>	<p>Felker – Change Reference Plant to Reference Unit</p>

 2010 July 27-29

67	<b>Date: 2001Aug09</b> <b>Status: Complete</b>		Dennis	<p>Contact Shawn concerning Clarification Statement</p> <p>2001jul11</p> <p>Ms. Shawn M. Coyne-Nalbach          NFSC Secretary          American Nuclear Society          555 North Kensington Avenue          La Grange Park, IL 60526-5592</p> <p>Dear Ms. Coyne-Nalbach:</p> <p>Subject: Request for Clarification</p> <p>Reference: ANSI/ANS-3.5-1998 Standard Document, Section 4.4.3.2</p> <p>I am a supervisor for the Nebraska Public Power District's Cooper Nuclear Station responsible for maintaining the functional requirements for our full-scope nuclear power plant control room simulator used for operator training and examination.</p> <p>I am writing this letter to your organization to request a clarification to the reference document in regards to Simulator Scenario-Based Testing.</p> <p>Section 4.4.3.2 of the reference document states that scenarios developed for the simulator, including the appropriate instructor interfaces and cueing, shall be tested before use for operator training or examination. The simulator shall be capable of being used to satisfy predetermined learning or examination objectives without exceptions, significant performance discrepancies, or deviation from the approved scenario sequence. A record of the conduct of these tests, typically in the form of a completed scenario or lesson plan checklist, and the evaluation of the test results, shall be maintained.</p> <p>I am concerned that the Standard requires scenarios developed for the simulator shall be tested before use for operator training or examination. It appears that this requirement may not be achievable with all operator training programs, namely initial license candidate training programs.</p> <p>Please clarify the preceding paragraph by addressing the following questions:</p> <ol style="list-style-type: none"> <li>1. What is the intent of scenario-based testing? Does scenario-based testing impose additional training program requirements?</li> </ol> <p>ANS-3.5 Working Group answer:</p> <p style="padding-left: 40px;">Scenario Based Testing is intended to best utilize, to the extent possible, the existing training scenario development process</p>

 Oconee Nuclear Station – Seneca, SC  
 2010 July 27-29

<b>72</b>	<b>Date: 2001Nov27</b> <b>Status: Complete</b>		<b>Shelly</b>	<p>Check if we can add an appendix and still reaffirm</p> <p><b>2001Nov27</b> <b>Shelly</b></p> <p>I contacted Suriya with this question, and her response was that a standard can be reaffirmed if the appendix/annex will be informative. If the additional appendix is informative, then you should supply a statement in the foreword regarding this informative piece. The statement in the foreword is NOT required but highly recommended.</p> <p>The standards cannot be reaffirmed if the additional appendix will be normative. In this case the standard will have to be considered under the revision process through ANSI.</p> <p>According to Webster's, NORMATIVE means "of, relating or conforming to, or prescribing norms". Based on this, we could add an appendix to the standard and still reaffirm the current standard, but we must ensure the appendix contains clarifying information and doesn't prescribe any new requirements or parameter limits.</p> <p>I consider this action closed unless someone knows of a need for further research on this issue.</p>
